

Symantec

250-447 Exam

**Symantec Administration of Symantec Client Management Suite
8.5 Exam**

**Questions & Answers
Demo**

Version: 8.0

Question: 1

DRAG DROP

How should an administrator configure the components on the left in order to inventory computers that are connected only through the Internet?

Drag and drop the components on the left into the correct zones on the right.

The diagram shows a network configuration interface. On the left, there is a list of components to be dragged: Microsoft SQL Server database, Notification Server, Deployment Site Server, Software Deployment Server, Firewall, Internet Gateway Server, Linux Server, and Windows desktop computer. On the right, there are three zones: External (dark blue), DMZ (yellow), and Internal (green). The zones are represented by colored boxes with white rectangular placeholders for components. The External zone has one placeholder, the DMZ zone has three placeholders, and the Internal zone has one placeholder.

Answer:

Windows Desktop Computer – Firewall – Internet Gateway Server – Firewall Notification Server

Question: 2

Which two (2) fields are essential to tracking assets when creating a warranty contract in IT Management Suite 8.1? (Select two.)

- A. Contract's Assigned User
- B. Covered Hardware
- C. Contract's Location
- D. Start and End Date
- E. Internal Reference

Answer: B, D

Question: 3

An administrator has been notified that a new office location will be opening within a few weeks. The office is a large site that will have 8,000 managed endpoints. The data center is located in Lindon, Utah and the office is located in Houston, Texas.

What is the minimum number of site servers needed to support the new office location?

- A. Four site servers
- B. Two site servers
- C. One site server
- D. Three site servers

Answer: B

Question: 4

An administrator needs to ensure the following functionality for managed computers in an IT Management Suite 8.1 environment:

- Monitoring hardware and software
- Scheduling software installations and file updates
- Collecting basic inventory information
- Managing policies and packages

Which components work together to provide this functionality for managed computers?

- A. Notification Server and Symantec Management Agent
- B. Symantec Management Console and Internet Gateway
- C. Symantec Management Console and Symantec Management Agent
- D. Notification Server and Internet Gateway

Answer: A

Question: 5

How can an administrator achieve greater efficiency and consistency when deploying multiple Managed Software Delivery policies to endpoints?

- A. Configure and run the Software Portal Settings policy to update existing Managed Software Delivery policies with default settings
- B. Configure the Software Catalog Item task to specify standardized settings for newly created Managed Software Delivery policies

- C. Update the Managed Delivery Settings policy to define standard default settings for new Managed Delivery policies
- D. Enable the Software Product Recalculation Schedule task to update existing Managed Software Delivery policies with predefined settings

Answer: C

Question: 6

An administrator needs to quickly deploy Windows 7 to several new computers without pre-configured operating systems. The administrator decides to use an existing Ghost image since the necessary drivers have already been added to the Deploy Anywhere database. The Network Boot Services configuration is set to respond only to known computers. How should the administrator proceed?

- A. Configure NBS to respond to a known list of MAC addresses and deploy the images only to the new systems
- B. Deploy an Automation Folder to the new computers to prepare them for imaging
- C. Import the list of new computers into the Management Console and assign an imaging task
- D. Use an Initial Deployment Event to distribute the image as the computers boot to the network

Answer: A

Question: 7

DRAG DROP

Which are the three Resource Model components?

Drag and drop the Resource Model components to the right side of the screen.

Data Class	Resource Association
Resource Association Type	Users
Hardware Resource	Resource Location
Sites	Subnets
Package	Software Resource

Resource Model components

Three dashed rectangular boxes are stacked vertically on the right side of the screen, intended for dropping the selected Resource Model components.

Answer:

Resource Association Type - Data Class – Resource Association

Question: 8

Which component of IT Management Suite 8.1 can an administrator use for management of both Windows and Mac OS X based computers?

- A. Deployment Solution
- B. Monitor Solution
- C. Workspace Virtualization
- D. Real Time System Manager

Answer: D

Question: 9

DRAG DROP

Which function does each IT Management Suite 8.1 component perform?

Match the components on the left to the correct function on the right by clicking on the component and dragging it to the appropriate function.

Component	<input type="text"/>	Function
SQL Analysis Services	<input type="text"/>	Provides a database for OLAP reporting
Notification Server	<input type="text"/>	Presents business level reports
SQL Database Services	<input type="text"/>	Provides a framework for IT Management Suite 8.1 functionality
Symantec Installation Manager	<input type="text"/>	Allows for the management of licenses
Site Server	<input type="text"/>	Communicates with the endpoints and the management server
Symantec Management Agent	<input type="text"/>	Facilitates communication with the management server
SQL Reporting Services	<input type="text"/>	Hosts the Symantec CMDB

Answer:

SQL Analysis Services - Provides a database for OLAP reporting

Notification Server – Provides a framework for ITMS 8.1 functionality

SQL Database services - Host the Symantec CMDB

Symantec Installation Manager – Allows for the management of the licenses

Site Server – Communicates with the endpoints and the management server

Symantec Management Agent – Facilitates communication with the management server

SQL Reporting Services – Presents business level reports

Question: 10

A corporate president has decided to centralize management of operating system updates after a virus spread through the corporate network. The president requires the ability to create reports about which updates have been deployed, which updates are still needed, and other information that will demonstrate the security of the network.

Which two (2) features of IT Management Suite 8.1 provide all of the required functionality? (Select two.)

- A. IT Analytics
- B. Patch Management Solution
- C. Software Management Solution
- D. Inventory Solution
- E. Monitor Solution

Answer: B, D
