---

**Answer: B**

---

Explanation:

---

**Question: 4**

---

An Adobe Commerce developer was asked to customize a JavaScript component which is written as a function.

How would the developer extend the native JavaScript function?

A.

```
define([
    'mage/utils/wrapper'
], function (wrapper) {
    'use strict';

    return function (yourCustomFunction) {
        return wrapper.map(yourCustomFunction, function (originalFunction, confi
g, element) {
            originalFunction(config, element);

            // add extended functionality here
        });
    };
});
```

B.

```
define([
    'mage/utils/wrapper'
], function (wrapper) {
    'use strict';

    return function (yourCustomFunction) {
        return wrapper.wrap(yourCustomFunction, function (originalFunction, confi
g, element) {
            originalFunction(config, element);

            // add extended functionality here
        });
    };
});
```

C.

```
define([
    'mage/utils/wrapper'
], function (wrapper) {
    'use strict';

    return function (yourCustomFunction) {
        return wrapper.wrap(yourCustomFunction, function (originalFunction) {
            originalFunction();

            // add extended functionality here
        });
    };
});
```

- A. Option A
