Varsian: 60

| | version. G.G | |
|---|--|---------------------------------|
| Question: 1 | | |
| is a change in the roperation in the 800° F to 1100° | nicrostructure of certain carbon steels and F range. | 0.5 Mo steels after long term |
| A. GraphitizationB. SofteningC. Temper EmbrittlementD. Creep | | |
| | | Answer: A |
| Question: 2 | | |
| What structure is 304 stainless st | reel? | |
| A. MartensiticB. AusteniticC. DuplexD. Ferritic | | |
| | | Answer: B |
| Question: 3 | | |
| is the result of cyclic | stress caused by variations in temperature. | |
| A. CreepB. Thermal FatigueC. Cyclic CrackingD. Stress Corrosion Cracking | | |
| | | Answer: B |
| Question: 4 | | |
| General or localized corrosion of compounds or microbiological ac | carbon steels and other metals caused by ctivities is called | dissolved salts, gases, organic |
| A. Flue Gas Corrosion B. Atmospheric Corrosion C. Cooling Water Corrosion | | |

- C. Cooling Water Corrosion
- D. None of the Above
- E. All of the Above

| | Answer: C |
|--|-----------|
| Question: 5 | |
| What structure is 410 stainless steel? | |
| A. Martensitic | |
| B. Austenitic | |
| C. Duplex D. Ferritic | |
| | Answer: A |
| Question: 6 | |
| The sudden rapid fracture under stress (residual or appendence of ductility or plastic deformation is called | |
| A. 885º F Embrittlement | |
| B. Temper Embrittlement | |
| C. Stress Corrosion Cracking | |
| D. Brittle Fracture | |
| | Answer: D |
| Question: 7 | |
| What structure is 409 stainless steel? | |
| A. Martensitic | |
| B. Austenitic | |
| C. Duplex | |
| D. Ferritic | |
| | Answer: D |
| Question: 8 | |
| Question. o | |
| Low alloy steels contain a maximum of chrome. | |
| A. 5% | |
| B. 6% | |
| C. 7.5% | |

D. 9%

| | Answer: D |
|---|----------------------------------|
| Question: 9 | |
| Which of the following can be affected by 885° F Embrittlement? | |
| A. 410 SS | |
| B. 430 SS | |
| C. 308 SS | |
| D. Alloy 2205 | |
| E. A, B and D | |
| | Answer: E |
| Question: 10 | |
| ` | |
| For 5Cr-0.5Mo, what is the threshold temperature for creep? | |
| A. 500º F | |
| B. 800º F | |
| C. 600º F | |
| D. 700º F | |
| | Answer: B |
| | Allswell D |
| Question: 11 | |
| has been a major problem on coke drum shells. | |
| A. Thermal fatigue | |
| B. Stress cracking | |
| C. Erosion | |
| D. Temper embrittlement | |
| | Answer: A |
| | Allswei. A |
| Question: 12 | |
| Thermal fatigue cracks propagate to the stress and are usua and oxide-filled. | lly dagger shaped, transgranular |
| A. Axial B. Diagonal | |

C. Transverse

| D. Angular | |
|--|----------------------------------|
| | Answer: C |
| Question: 13 | |
| Inspection for wet H2S damage generally focuses on and | |
| A. Weld seams | |
| B. Nozzles | |
| C. Trays | |
| D. Down comers | |
| E. A and B | |
| | Answer: E |
| | |
| Question: 14 | |
| is a form of erosion caused by the formation and instantaneous vapor bubbles. | ous collapse of innumerable tiny |
| A. Condensate corrosion | |
| B. Cavitation | |
| C. Dew-Point corrosion | |
| D. Atmospheric corrosion | |
| | Answer: B |
| Question: 15 | |
| With CUI, corrosion rates with increasing metal temperat water evaporates quickly. | ures up to the point where the |
| A. Decrease | |
| B. Increase | |
| C. Stay the same | |
| D. None of the above | |
| | Answer: B |
| | |
| Question: 16 | |
| Which of the following metals is the most anodic? | |

A. Zinc

| C. Nickel | | |
|--|-------------------|-------------------------------|
| D. Monel | | |
| | | Answer: A |
| | | |
| Question: 17 | | |
| Cracking of dissimilar weld metals occurs on the Ferritic material operating at high temperatures. | _ side of a weld | between an austenitic and a |
| A. Austenitic | | |
| B. Ferritic | | |
| C. Anodic D. Cathodic | | |
| D. Catriouic | | |
| | | Answer: B |
| | | |
| Question: 18 | | |
| Soil to Air interface areas are usually more susceptible to co | orrosion than the | rest of the structure because |
| A. Moisture B. Bacteria C. Oxygen D. B and C E. A and C | | |
| | | Answer: E |
| | | |
| Question: 19 | | |
| Carburization can be confirmed by substantial increases in _ | and loss | s of |
| A. Hardness | | |
| B. Tensile Strength | | |
| C. Ductility D. A and B | | |
| E. A and C | | |
| | | |
| | | Answer: E |
| Question: 20 | | |

B. Carbon Steel

| Liquid metal embrittlement can occur if 300 Series SS comes in contact with | n moiten |
|---|--------------------------------|
| A. Copper B. Mercury C. Zinc D. Lead | |
| | Answer: C |
| Question: 21 | |
| Cracks that are typically straight, non-branching, and devoid of any associated with which type of failure? | ciated plastic deformation are |
| A. Stress corrosion cracking B. Brittle fracture C. Thermal fatigue D. Temper embrittlement | |
| | Answer: B |
| Question: 22 | |
| | |
| At high temperatures, metal components can slowly and continuously d yield strength. This time dependent deformation of stressed components is | |
| | |
| yield strength. This time dependent deformation of stressed components is A. Creep B. Ductility C. Softening | |
| yield strength. This time dependent deformation of stressed components is A. Creep B. Ductility C. Softening | known as? |
| yield strength. This time dependent deformation of stressed components is A. Creep B. Ductility C. Softening D. Hardening | Answer: A |
| yield strength. This time dependent deformation of stressed components is A. Creep B. Ductility C. Softening D. Hardening Question: 23 Permanent deformation occurring at relatively low stress levels as a result. | Answer: A |
| yield strength. This time dependent deformation of stressed components is A. Creep B. Ductility C. Softening D. Hardening Permanent deformation occurring at relatively low stress levels as a resucalled A. Stress cracking B. Brittle fracture C. Temper embrittlement | Answer: A |

| Question: 24 | |
|---|-------------------|
| usually occurs when a colder liquid contacts a warm | er metal surface. |
| | |
| A. Brittle fracture | |
| B. Thermal fatigue C. Thermal shock | |
| D. Stress rupture | |
| · | |
| | Answer: C |
| Overtion, 25 | |
| Question: 25 | |
| Nickel based alloys usually contain nickel. | |
| A. ≥30% | |
| B. ≥20% | |
| C. ≥10% | |
| D. ≥12% | |
| | Answer: A |
| Question: 26 | |
| is a change in the microstructure of certain carbon stee operation in the 800º F to 1100º F range that may cause a loss resistance. | _ |
| A. Embrittlement B. Carburization C. Graphitization D. Sensitization | |
| | Answer: C |
