CDCS-001 Exam

Certified Data Centre Specialist

[Questions & Answers Demo]

Version: 4.0

Question: 1

Which one of the following is a Physical Security Identification Method?

A. Voice
B. Expression
C. Sound
D. Batch ID

Answer: A

Explanation:

Voice identification is a physical security identification method that uses the sound of an individual's voice to identify them. This method is often used in combination with other identification methods, such as biometric scans, to provide a more secure form of authentication. Voice identification is used in a variety of situations, such as when accessing a secure facility or when making financial transactions.

Question: 2

True or False: Human error is a major cause of data center downtime

A. True
B. False

Answer: A

Explanation:

Human error is a major cause of data center downtime. Human mistakes are one of the top causes of data center outages, accounting for around one-third of all downtime incidents. Common causes of human error in data centers include misconfiguration, inadequate maintenance, and improper security practices. To reduce the risk of human error, it is important to ensure that data center staff receive proper training, have adequate access control measures in place, and are familiar with best practices for data center operations.

Question: 3

Which one of the following is a Physical Security Device?

A. Access Key
B. Contactless smart card
C. Token card
D. Fiber optic cable

Answer: B

Explanation:

A contactless smart card is a physical security device that uses radio frequency identification (RFID) technology to identify and authenticate an individual. This type of card is used in a variety of applications, such as access control systems and digital payment systems. It is also used in physical access control systems, where the card is used to unlock doors or grant access to restricted areas. Contactless smart cards are also used in building access systems, where the card is used to grant access to certain areas of the building.

Question: 4

Which one of the following uses sensors such as laser beams or touch sensor?

A. CCTV
B. Server
C. Alarms
D. Backup device

Answer: C

Explanation:

Alarms are physical security devices that use sensors such as laser beams or touch sensors to detect movement or intrusion. These devices are used to alert the user of any unauthorized activity in the area. Alarms can also be used in combination with CCTV cameras to provide a comprehensive security system.

Question: 5

_____ security means keeping unauthorized or ill-intentioned people out of places that they do not belong.

A. Logical
B. Topological
C. Network
D. Physical

Answer: D

Explanation:

Physical security means keeping unauthorized or ill-intentioned people out of places that they do not

belong. This can involve a variety of measures, such as locks, alarms, access control systems, cameras, and guards. Physical security is an important part of any security system, as it helps to protect valuable assets and personnel from theft, vandalism, and other malicious activities.
