The figure shows the ABAP short dump of an aborted transaction in an SAP system. Which of the following statements are true?

Runtime Errors   Edit   Goto   System   Help

Runtime Error - Description of Exception

Long Text   Debugger

Category	ABAP Programming Error
Runtime Errors	TIME_OUT
ABAP Program	ZREPORT2
Application Component	Not Assigned
Date and Time	01.12.2011 09:55:38

Short text
  Time limit exceeded.

What happened?
  The program "ZREPORT2" has exceeded the maximum permitted runtime without
  interruption and has therefore been terminated.

Error analysis
  After a specific time, the program is terminated to make the work area
  available to other users who may be waiting.
  This is to prevent a work area being blocked unnecessarily long by, for
  example:
  - Endless loops (DO, WHILE, ...),
  - Database accesses with a large result set
  - Database accesses without a suitable index (full table scan)

  The maximum runtime of a program is limited by the system profile
  parameter "rdisp/max_wprun_time". The current setting is 300 seconds. If this
   time limit is
  exceeded, the system attempts to cancel any running SQL statement or
  signals the ABAP processor to stop the running program. Then the system
  waits another 60 seconds maximum. If the program is then still active,
  the work process is restarted.
